IRIS Release Notes

5.7.3.5 – Released March 4, 2020

Pre-Arrival		
Description	Type	Ticket
Changes to Assurance screen buttons Added "Request Amended Assurance" button to RA's Assurance screen when Assurance Status is Inactivated. Also, removed the "I confirm" checkbox and "Assure" button from the affiliate's screen when Assurance Status is Assured.	Enhancement	234150
Interest – Affiliate Transfer Added the ability for an RA to transfer an Interest from one network affiliate to another when the status is Submitted to RSC.	Enhancement	235084
Interest - Reopen Added the ability to reopen a closed Interest.	Enhancement	235092
Affiliate Program Capacity Fields are no longer required. IRIS will no longer calculate totals. All fields will be optionally entered by the RA user.	Enhancement	234860, 235858

Post-Arrival		
Description	Type	Ticket
R&P Period Report - Question 6 - PA URM Removed the rule that was not working properly where when a member was the PA and a URM (Minor Code = M4), IRIS was not allowing entry of ongoing services even when Question 6 was set to Yes. Instead, for PA URMs, when Yes, user will be able to select ongoing services and, when No, the services will disappear from the screen and be replaced by the following comment in red font: Client is an M4 Foster Care case. Note that this affects LIRS only since they are the only IRIS-using RA that handles URMs.	Bug	233617
R&P Period Report – Question 5 – Enrolled in ESL Corrected issue caused by the auto-select and disabling of Question 5 on the member report for minors who arrived at 17 years old and turned 18 after arrival. "N/A" was displaying in the field on the screen in IRIS, however, "N/A" was never moved to the database, and so the field contained a NULL value. That issue has been resolved.	Bug	236657
New Email Address Field on Address Screen New field to track case member email address on post-arrival individual address screen.	Enhancement	234719

Matching Grant

Description	Type	Ticket
MG 180- and 120-Day Report Job Validation Ensure a job included on an MG 180- or 120-Day report has the job wage and hours included. The validation rule will check that a wage and hours are present before the report may be submitted.	Enhancement	234255
MG 120 Day Report Job Grid Corrected formatting error with extra cells in grid.	Bug	234737
MG Data File Export and MG PPR Update Minor updates to make the MG data file export consistent with the MG PPR. For any sections of the MG Progress report that use the MG case outcome status from the 120- or 180-day report, the respective 120- or 180-day report must be submitted. The applicable sections are B2, B3, B4, C2, C3, C4, C5, D2, D3, and D4. Consistent with ORR's reporting logic, the "Effective Date" for a job's wage must be on or before the 180th day to include the job in section C. Consistent with ORR's reporting logic, a job's end date must be blank or on or after the reporting period start date to be included in the MG PPR or Export. Corrected a bug that made the job end date the same as the job start date in the MG Export	Bug	231202
MG Data File Verify Process Created a process to test that the MG data file export will produce the same values as the IRIS MG PPR.	Enhancement	236607

Reports

Description	Type	Ticket
Consolidated Statistics Standard Report New standard report combining select data points for arrivals, R&P outcomes and MG 180-day outcomes for each affiliate.	Enhancement	233238
Custom Report IRIS_INTERST2PRECASEPERSON Corrected issue in which the data source was restricted to ten records.	Bug	233827
Update Custom Report Version Update to the latest version of the IRIS custom report tool providing minor bug fixes and improvements.	Enhancement	232170
Daily Travel Summary Standard Report	Bug	233959

Reports

Description	Type	Ticket
Modified the report to include data that was missing in various sections of it. Examples: Individual count for deleted or canceled flights and POE for rescheduled flights.		

Administration

Description	Type	Ticket
Admin Configuration - WRAPS Export In the WRAPS Export section of the Admin Configuration module, removed the "InterestFileEmailTo" field. The functionality that included that email address is obsolete and no longer used.	Enhancement	233958
eABN/eDOM – eABNNoteInd table Discontinued adding data to the eABNNoteInd table as it is no longer needed. It used to be used during WRAPS imports to display a list of cases where travel data had come through previously for one or more members of a case. That process was stopped a while ago because it proved to be more confusing than helpful. Therefore, the eABNNoteInd table is no longer used and does not need to be updated any longer.	Enhancement	234624
Test IRIS – Web Job & User Account changes In Test instances of IRIS only, the following changes have been made: • Azure Web Jobs will restart automatically upon user log-in. This means the dashboard notifications will update without IRIS Support having to restart the Web Jobs. • User email addresses will remain in Test user accounts during a data refresh so that log-on related emails can be delivered (ex: forgot password, verification code, account locked, etc.). Per usual, other notifications will not be emailed out from Test instances.	Enhancement	235840
Case Advanced Search Provided the ability to search by alien number that is formatted with dashes (ex. 111-222-333).	Enhancement	236016
