Bug Fixes

Request ID	Subject	Category
389548	CWS Placement Error - Wilson mapper error	Pre-Arrival
Fixed Issue with placing a refuge case with an affiliate causing an error.		
389379	Case Placement Tab Errors when IRISCaseToOrg Record marked Deleted	Administration
Fixed an issue with placement tab error. Added new lines to dbo.IRISCaseToOrg table for new placement change and existing row can be marked deleted afterwards only		
388055	Assurance Export Issue	Administration
Fixed an error during Assurance export due to which IRIS never created Export log under dbo.Assurance_REF_AssuranceStatus but dbo.Assurance.SentDate was updated therefore this case was removed from export queue and Assurance was never sent again.		

389225	IRIS Custom Fields Not Working	Administration
We are having few issue with Custom Fields created on Tasks i.e. 1. When we add a value to custom field and save on Tasks, they do not save and stay blank. 2. When we change status of a Task from Pending to Completed, all Custom Fields on Tasks disappear.
